## Accessibility Statement

BCcampus Open Education believes that education must be available to everyone. This means supporting the creation of free, open, and accessible educational resources. We are actively committed to increasing the accessibility and usability of the resources we produce.

## Accessibility of This Resource

The web version of this resource has been designed to meet Web Content Accessibility Guidelines 2.0, level AA. In addition, it follows all guidelines in Appendix A: Checklist for Accessibility of the Accessibility Toolkit - 2nd Edition. It includes:

- Easy navigation. This resource has a linked table of contents and uses headings in each chapter to make navigation easy.
- Accessible math equations. Many of the equations in this resource have been written in LaTeX and rendered with MathJax, which makes them accessible to people using screen readers that are set up to read MathML. The rest of the equations are rendered as images with appropriate alternative text.
- Accessible images. All images in this resource that convey information have alternative text. Images that are decorative have empty alternative text.
- Accessible links. All links use descriptive link text.

Accessibility Checklist

| Element | Requirements | Pass? |
| :--- | :--- | :--- |
| Headings | Content is organized under headings and subheadings that are used sequentially. | Yes |
| Images | Images that convey information include alternative text descriptions. These descriptions are <br> provided in the alt text field, in the surrounding text, or linked to as a long description. | Yes |
| Images | Images and text do not rely on colour to convey information. | Yes |
| Images | Images that are purely decorative or are already described in the surrounding text contain <br> empty alternative text descriptions. (Descriptive text is unnecessary if the image doesn't <br> convey contextual content information.) | Yes |
| Tables | Tables include row and/or column headers that have the correct scope assigned. | Yes |
| Tables | Tables include a title or caption. | No |
| Tables | Tables do not have merged or split cells. | Yes |
| Tables | Tables have adequate cell padding. | Yes |
| Links | The link text describes the destination of the link. | Yes |
| Links | Links do not open new windows or tabs. If they do, a textual reference is included in the <br> link text. | Yes |
| Links | Links to files include the file type in the link text. | Yes |
| Audio | All audio content includes a transcript that includes all speech content and relevant <br> descriptions of non-speech audio and speaker names/headings where necessary. | N/A |
| Video | All videos include high-quality (i.e., not machine generated) captions of all speech content <br> and relevant non-speech content. | N/A |
| Video | All videos with contextual visuals (graphs, charts, etc.) are described audibly in the video. | N/A |
| H5P | All H5P activities have been tested for accessibility by the H5P team and have passed their <br> testing. | N/A |
| H5P | All H5P activities that include images, videos, and/or audio content meet the accessibility <br> requirements for those media types. | N/A |
| Formulas | Formulas have been created using LaTeX and are rendered with MathJax. | Yes |
| Formulas | If LaTeX is not an option, formulas are images with alternative text descriptions. | Yes |
| Font | Font size is 12 point or higher for body text. | Yes |
| Font | Font size is 9 point for footnotes or endnotes. | Yes |
| Font | Font size can be zoomed to 200\% in the webbook or eBook formats. |  |

## Known Accessibility Issues and Areas for Improvement

This book is written in a way that is biased towards people with vision. So while the book technically meets accessibility guidelines, there are activities and concepts that are communicated in ways that will not be equally accessible to students with disabilities that affect their vision.

## Let Us Know if You are Having Problems Accessing This Book

We are always looking for ways to make our resources more accessible. If you have problems accessing this resource, please contact us to let us know so we can fix the issue.

Please include the following information:

- The name of the resource
- The location of the problem by providing a web address or page description.
- A description of the problem
- The computer, software, browser, and any assistive technology you are using that can help us diagnose and solve your issue (e.g., Windows 10, Google Chrome (Version 65.0.3325.181), NVDA screen reader)

You can contact us one of the following ways:

## For Students: How to Access and Use this Textbook

This textbook is available in the following formats:

- Online webbook. You can read this textbook online on a computer or mobile device in one of the following browsers: Chrome, Firefox, Edge, and Safari.
- PDF. You can download this book as a PDF to read on a computer (Digital PDF) or print it out (Print PDF).
- Mobile. If you want to read this textbook on your phone or tablet, you can use the EPUB (eReader) file.
- HTML. An HTML file can be opened in a browser. It has very little style so it doesn’t look very nice, but some people might find it useful.

For more information about the accessibility of this textbook, see the Accessibility Statement.
You can access the online webbook and download any of the formats for free here: Adult Literacy Fundamental Mathematics: Book 3-2nd Edition. To download the book in a different format, look for the "Download this book" drop-down menu and select the file type you want.

How can I use the different formats?

| Format | Internet <br> required? | Device | Required apps | Accessibility Features | Screen <br> reader <br> compatible |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Online <br> webbook | Yes | Computer, <br> tablet, <br> phone | An Internet browser <br> (Chrome, Firefox, <br> Edge, or Safari) | WCAG 2.0 AA compliant, option to <br> enlarge text, and compatible with <br> browser text-to-speech tools | Yes |
| PDF | No | Computer, <br> print copy | Adobe Reader (for <br> reading on a <br> computer) or a <br> printer | Ability to highlight and annotate the <br> text. If reading on the computer, you <br> can zoom in. | Unsure |
| EPUB | No | Computer, <br> tablet, <br> phone | An eReader app | Option to enlarge text, change font <br> style, size, and colour. | Unsure |
| HTML | No | Computer, <br> tablet, <br> phone | An Internet browser <br> (Chrome, Firefox, <br> Edge, or Safari) | WCAG 2.0 AA compliant and <br> compatible with browser <br> text-to-speech tools. | Yes |

## Tips for Using This Textbook

## - Search the textbook.

- If using the online webbook, you can use the search bar in the top right corner to search the entire book for a key word or phrase. To search a specific chapter, open that chapter and use your browser's search feature by hitting [Cntr] + [f] on your keyboard if using a Windows computer or [Command] + [f] if using a Mac computer.
- The [Cntr] + [f] and [Command] + [f] keys will also allow you to search a PDF, HTML, and EPUB files if you are reading them on a computer.
- If using an eBook app to read this textbook, the app should have a built-in search tool.

## - Navigate the textbook.

- This textbook has a table of contents to help you navigate through the book easier. If using the online webbook, you can find the full table of contents on the book's homepage or by selecting "Contents" from the top menu when you are in a chapter.

## - Annotate the textbook.

- If you like to highlight or write on your textbooks, you can do that by getting a print copy, using the Digital PDF in Adobe Reader, or using the highlighting tools in eReader apps.

## About BCcampus Open Education

Adult Literacy Fundamental Mathematics: Book 3 - 2nd Edition was funded by BCcampus Open Education.

BCcampus Open Education began in 2012 as the B.C. Open Textbook Project with the goal of making post-secondary education in British Columbia more accessible by reducing students’ costs through the use of open textbooks and other OER. BCcampus supports the post-secondary institutions of British Columbia as they adapt and evolve their teaching and learning practices to enable powerful learning opportunities for the students of B.C. BCcampus Open Education is funded by the Ministry of PostSecondary Education and Future Skills and the Hewlett Foundation.

Open educational resources (OER) are teaching, learning, and research resources that, through permissions granted by the copyright holder, allow others to use, distribute, keep, or make changes to them. Our open textbooks are openly licensed using a Creative Commons licence and are offered in various eBook formats free of charge, or as printed books that are available at cost.

## To the Learner

## Welcome to Adult Literacy Fundamental Mathematics: Book 3.

You have the skills you need to be a strong student in this class. Your instructor knows this because you have passed the Adult Literacy Fundamental Mathematics Level 2 class, or you have been assessed into this level.

Adult math learners have many skills. They have a lot of life experience. They also use math in their everyday lives. This means that adult math learners may already know some of what is being taught in this book. Use what you already know with confidence!

## How to Use This Book

This textbook has:

- A Table of Contents listing the units, the major topics, and the subtopics.
- A Glossary giving definitions for mathematical vocabulary used in the course.
- A Grades Record to keep track of your marks.
- Many Exercises to practice what you learned. Some are quite short, but others have a great number of questions. You do not have to do every single question!
- Do as many questions as you feel are necessary for you to be confident in your skill. It is best to do all the word problems.
- If you leave out some questions, try doing every second or every third question. Always do some questions from the end of each exercise because the questions usually get harder at the end. You might use the skipped questions for review before a test.
- If you are working on a difficult skill or concept, do half the exercise one day and finish the exercise the next day. That is a much better way to learn.
- Self-tests at the end of most topics have an "Aim" at the top. If you do not meet the aim, talk to your instructor, find what is causing the trouble, and do some more review before you go on.

## Mark $\quad / 18$ Aim 15/18

- A Review and Extra Practice section is at the end of each unit. If there is an area of the unit that you need extra practice in, you can use this. Or, if you want, you can use the section for more review.
- A Practice Test is available for each unit. You may:
- Write the practice test after you have studied the unit as a practice for the end-ofchapter test, OR
- You might want to write it before you start the unit to find what you already know and which areas you need to work on.
- Unit Tests are written after each unit. Again, you must reach the Aim before you begin the next unit. If you do not reach the aim, the instructor will assist you in finding and practising the difficult areas. When you are ready, you can write a B test to show that you have mastered the skills.
- A Final Test is to be written when you have finished the book. This final test will assess your skills from the whole book. You have mastered the skills in each unit and then kept using many of them throughout the course. The test reviews all those skills.

## Grades Record

You have also been given a sheet to write down your grades. After each test, you can write in the mark. This way you can keep track of your grades as you go through the course. This is a good idea to use in all your courses.

Grade Record - Book 3

## How to Deal with Math Anxiety

## Emotions and Learning

Emotions, or what we feel about something, play a big part in how we learn. If we are calm, we learn well. If we are afraid or stressed, we do not learn as well.

Many people are afraid of math. They fear making a mistake. "Math anxiety" is the fear of math. People who suffer from math anxiety may get headaches, sick stomachs, cold hands, or they may just sweat a lot or just feel scared. Math anxiety can happen for a few different reasons:

- Feeling anxious when writing tests
- Negative experiences in a past math class
- Embarrassment in a past math class
- Social pressures and expectations to not like math or not do well in math
- The want to get everything right
- Negative self-message ("I don’t know how to do it," or "I hate math")

Math anxiety is a learned habit. If it is learned, it can be unlearned. Most math anxiety comes from bad memories while learning math. It may be from doing badly on a test or asking a question then being made fun of. These bad memories can make learning math hard.

Everyone can learn math. There is no special talent for math. There are some people who are better at math than others, but even these people had to learn to be good at math.

## Do You Suffer from Math Anxiety?

Read the list below and put a check mark beside the ones you feel when thinking about or doing math.

- Are your palms moist?
- Is your stomach fluttering?
- Do you feel like you can't think clearly?
- Do you feel like you would rather do anything else than learn math?
- Are you breathing faster than normal?
- Is your heart pounding?
- Do you feel cold?
- Do you feel sweaty?

If you answered yes to two or more of these items, you may have math anxiety.
If you have math anxiety, a first step to understanding it is to look at where it all started.
Make a list of your experiences with learning math. Think back to the first math experiences you had and write about them. Think about learning math in school from the younger grades to the higher grades and write about your experiences and feelings. Include this class and how you are feeling right now about learning math.

Beside each experience, write if it was a positive or negative experience.
Look at the examples below to give you an idea:

| Positive <br> or <br> negative? | Math experience |
| :--- | :--- |
| Negative | My teacher in elementary school lined the whole class up in a row and made us play a <br> multiplication game. I could see which question was mine, and I didn't know the answer so I had to <br> figure it out on my fingers before my turn came up. I got the answer right, but I was so nervous that <br> I would be teased because I didn't know the answer off the top of my head. I still don't know my <br> times tables. |
| Positive | In high school, I could use a calculator to figure out the simple multiplication problems, and then I <br> could figure out the tougher problems without worrying about knowing my times tables. |
| Negative | Now that I am upgrading my math, I feel nervous every time I even think about opening the book. I <br> want to get all the answers right, and I know that I won't be able to. I really need everything to be <br> right so that I know that I am getting it. |

Once you have made a list of experiences, go over the stories with your instructor, or by yourself and try to find some common themes.

- Can you see when you felt anxiety?
- Can you see why you are now anxious about math?
- Is there any experience you could use now to help you feel calmer about math?

Hopefully by examining the beginnings of the anxiety, you can feel more in control of it.

## How to Deal with Math Anxiety

Anyone can feel anxiety that will slow down learning. The key to learning is to be the "boss" of your anxiety. Here are an overview of some strategies that may help deal with your anxiety:

- Use breathing exercises
- Think positive math messages
- Know your textbook
- Understand test-taking anxiety

Remember, learning to deal with your math anxiety may take some time. It took you a long time to learn math anxiety, so it will take some time to overcome it.

## Use Breathing Exercises

One way to be the "boss" is to relax. Try this breathing exercise.

Breathing Exercise

Start by breathing slowly to the count of four. It may help to close your eyes and count.
Now hold your breath for four counts and then let your breath out slowly to the count of four.
The counting is silent and should follow this pattern: "Breath in, two, three, four. Hold, two, three, four.
Breath out, two, three, four. Wait, two, three, four."
With practice, the number of counts can be increased. This is an easy and good way to relax.
Now, try this exercise quietly and repeat it five times slowly.

Each time you feel anxious about learning, use the breathing exercise to help calm yourself. Ask yourself if what you tried worked. Do you feel calmer?

## Think Positive Math Messages

Another way to be the "boss" is to give yourself positive math messages.
Read and think about the positive math messages listed below. Do you say any of those things to yourself?

- If the answer is yes, then great, keep doing that.
- If your answer is no, try to add this little mental trick to your day. The result will probably be that you start to see math as something you can do and that you may even like!

## I like math.

## I am good at math.

## I understand math.

## I can relax when I am studying math.

I am capable of learning math.

## Math is my friend.

## My math improves every day.

## I am relaxed, calm and confident when I study math. <br> I understand math when I give myself a chance. <br> Math is creative.

Pick three statements that you like and say them to yourself as much as you can in each day. You can also write the statements out on paper and post them around your house so that you read them throughout the day.

## Know Your Textbook

Look at the Table of Contents in the front of your textbook. It tells you what you will be learning. You may see some things that you already know, some things that you may have forgotten, and some things that are new to you.

Flip the pages. You can see that the textbook is split into units. Each unit is something to learn.
Each unit has exercises to do. Notice the answers are at the end of the exercise. You can check your answers as soon as you are done. You can also check your answer before moving on if are not sure if you are doing the question right.

At the end of each unit is a self-test. It is a chance for you to see how well you have learned the skills in the unit. If you do well, you can move on. If you don't do well, you can go back and practice those skills.

Knowing your textbook gives you a good skill. If you get frustrated, you can use the Table of Contents to go back and find some help.

## Understand Test-Taking Anxiety

There are four reasons people are anxious when writing tests. Any of the four reasons listed below might be the reason a person might feel anxious in a test-taking situation.

1. Not feeling prepared for the test
2. Not sure how to write the test in the best way
3. Feeling too much mental pressure
4. Poor health habits before writing a test

Here is an explanation of each reason and how to work your way out of the anxiety you may feel during tests.

## 1. Not feeling prepared for the test

Many students feel anxiety about taking math tests because they do not feel prepared for the test. To feel prepared, a student needs to have studied the work and know that they can do the problems they will be given. Get help from your classmates, friends, or your instructor to find out how you can improve your study habits.

Getting ready for a test starts on the first day of class. Everything you do in class and at home is part of that getting ready.

- Always do as many exercises as you need to help you understand. Once you understand, do ten more questions, then you will know for sure that you really understand.
- Always correct your exercises. It is good to know that you are understanding and getting the questions right. It is also good to know if you are not understanding and need some help.
- Always do the self-tests. The self-tests can show things that you are not sure of.
- Always do the review. Review is part of this book. It is a chance to go over all the things you have learned in a unit before moving on. It prepares you for what will be on the test.
- Always do a practice test. A practice test gives you a chance to see how many questions and what kind of questions are on the test.

## 2. Not sure how to write the test in the best way

Here are some strategies students should know about how to write a test to do the best as possible on it:

- Before the Test

1. Arrive early. Get out all the supplies you need to do the test (pencils, ruler, calculator, watch, etc.).
2. Be comfortable, but alert. Choose a good spot in the room, and make sure you have enough space to work. Maintain a comfortable posture in your seat, but don't "slouch."
3. Stay relaxed and confident. Keep a good attitude. If you find yourself anxious, take several slow, deep breaths to relax. Don't talk about the test to other students just before entering the room: their anxiety can be contagious.

- During the test.

1. Look over the test. Take a look at the whole test before starting. This takes very little time. Use a highlighter to highlight the questions that you know you can do easily, note key terms, mark the test with comments that come to mind. As you work, put a star beside any questions that you would like to go over again when you finish the test.
2. Relax. Before starting the test, imagine yourself somewhere where you are calm and confident. Go there in your mind. Focus on how good you feel and how in control you are. If you become anxious during the test, in your mind go to the
calming place. Focus on how calm you feel. Then go back to your test.
3. Read the directions carefully. This may be obvious, but it will help you avoid careless errors.

## 4. Answer questions in a strategic order.

- Answer the easy questions first. This will help to build confidence and score points. It may also help you make connections with more difficult questions.
- Then answer the difficult questions. Work on these harder questions with all the energy of the easier ones.

5. Review your answers. Resist the urge to leave as soon as you are done writing. Spend as much time as you can going over your test to see if you:

- Answered all the questions.
- Wrote the answers in right.
- Did not make simple mistakes.

## 3. Feeling too much mental pressure

There are many reasons why a student may feel mental pressure when writing a test. Listed below are a few main reasons:

- Negative beliefs about one's math abilities
- Low self-esteem when it comes to math
- Too high expectations of success
- Fear that failure or low grades will affect the future
- Feelings of pressure of not wanting to let down family members

When students feel this kind of pressure, it is very hard to feel calm and relaxed about a test. The key to success in a math test is to keep the anxiety at a manageable level. You can do this in two ways:

1. Change negative self-talk. Any time a negative thought creeps into your head, it will make it harder to stay positive and relaxed about your test. If you have a negative thought like "I can't do it", try to replace it with a positive thought like "I can do this".
2. Use relaxing and calming techniques. Use the calming breathing mentioned earlier in this section. This will help you keep calm. Also, do not study in the last half hour before the test. You will be calmer by spending time relaxing and breathing deeply in that last half hour.

## 4. Poor health habits before writing a test

When your body and mind are healthy, you will have a better chance of doing well on a test. Eat well, drink plenty of water and get daily exercise. The better you feel, the better you can perform (and a test is a performance!).

## Unit 1: Multiplication

## Topic A: Multiplying Larger Numbers

It is usually easier to multiply larger numbers if they are written underneath each other. The bottom number is called the multiplier.

To find the product of a one digit multiplier, use as many of these steps as you need to complete each multiplication question:

- Step 1: Multiply the ones digit in the large number by the one-digit multiplier.
- Step 2: Multiply the tens digit in the large number by the multiplier.
- Step 3: Multiply the hundreds digit in the large number by the multiplier.
- Step 4: Multiply the thousands digit in the large number by the multiplier.

## Example A

$62 \times 4=$
Step 1: $4 \times 2$ ones $=8$

Step 2: $4 \times 6$ tens $=24$ tens $=2$ hundreds and 4 tens

| 62 |
| ---: |
| $\times \quad 4$ |
| 248 |

The product of $62 \times 4$ is 248 .

## Renaming and Carrying

In the times tables, the products are often two digit numbers. You must rename and carry. The amount you carry is added onto the product of the next column.

```
Example D
```

Step 1: Multiply the ones by the multiplier.
$7 \times 8$ ones $=56$ ones $=5$ tens +6 ones
Write the 6 ones in the product.
Carry the 5 tens to the tens column and make a note of it for yourself. You might write it above the tens column.

Step 2: Multiply the tens by the multiplier.
$7 \times 6$ tens $=42$ tens
Now add on the 5 tens that you carried.
42 tens +5 tens $=47$ tens $=4$ hundreds and 7 tens

## Topic B: Two- and Three-Digit Multipliers

When the multiplier is more than one digit, you use the same process and get partial products. You repeat the steps until you have multiplied by every digit, then add the partial products together.

## Multiplying by Two-Digit Multipliers

Example A
$24 \times 23=$
Part 1: Multiply by the ones digit in the multiplier.
Multiply 3 ones by 24 using the method you already know. The first partial product is 72.

| 1 |
| :--- |
| 24 |
| $\times \quad 23$ |
| 72 |

Part 2: Multiply by the tens digit in the multiplier. First, put a 0 to hold the ones place in your partial product. We are multiplying by a ten, so we hold the ones place.

Step 1: Multiply 2 tens 4 ones $=8$ tens Write the 8 tens under the tens in your first partial product. It is very important to keep the columns straight - ones under one, tens under tens.
Step 2: Multiply 2 tens 2 tens $=4$ hundreds Write the 4 hundreds in your partial product. The second partial product is 480 .

$$
\begin{array}{r}
1 \\
\\
24 \\
\times \quad 23 \\
\hline 72 \\
480
\end{array}
$$

Part 3: Add the partial products together, being sure to add ones to ones, tens to tens, hundreds to hundreds. The sum is the final product.

Draw a line under the partial products. Add. Check your addition.

|  |
| :--- |
| 1 |
| 24 |
| $\times \quad 23$ |
| 72 |
| $+\quad 480$ |
| 552 |

## Example B

$36 \times 425=$
Part 1: Multiply by the ones digit in the multiplier. $6 \times 425=2550$

| 13 |
| ---: |
| 425 |
| $\times \quad 36$ |
| 2550 |

Part 2: Multiply by the tens digit in the multiplier. First put a 0 to hold the ones place in the second partial product.

- Step 1: 3 tens $\times 5$ tens $=15$ tens $=1$ hundred and 5 tens Write the 5 tens in the second partial product and carry the 1 hundred. Now you can see why it is best to cross out the numbers you carry as soon as you have added them to the product.
- Step 2: 3 tens $\times 2$ tens $=6$ hundreds 6 hundreds +1 hundred (carried) $=7$ hundreds. There is nothing to carry.
- Step 3: 3 tens $\times 4$ hundreds $=12$ thousands

| 1 |
| ---: |
| 13 |
|  |
| 425 |
| $\times \quad 36$ |
| 2550 |
|  |
| 12750 |

Part 3: Add the partial products together.

|  | 1 |
| ---: | ---: |
|  | 13 |
|  | 425 |
| $\times \quad 36$ |  |
|  | 2550 |
| $+\quad 12750$ |  |
|  | 15300 |

Tip: Keeping the columns straight with ones under ones, tens under tens, hundreds under hundreds is very important. Working on large-squared graphing paper using one digit per square is often helpful.

When the multiplier has a zero in the ones place, use this shortcut.

```
Example C
```

- Step 1: 0 ones $\times 48=0$. Place one zero in the product and that will hold the ones place.

## Multiplying by Three-Digit Multipliers

To multiply by three digit multipliers, use the same method with one more part.

| 417 |
| ---: |
| $\times \quad 368$ |
| 3336 |
| 25020 |
| $+\quad 125100$ |
| 153456 |

- Part 1: Multiply by the 8 ones.
- Part 2: Multiply the 6 tens; hold the ones place with 0.
- Part 3: Multiply by the 3 hundreds. Put 00 to hold the ones and tens places in the third partial product.
- Step 1: 3 hundreds $\times 7$ ones $=21$ hundreds $=2$ thousands and 1 hundred. Write the 1 hundred and carry the 2 thousands.
- Step 2: 3 hundreds $\times 1$ ten $=3$ thousands. 3 thousands +2 thousands (carried) $=5$ thousands.
- Step 3: 3 hundreds $\times 4$ hundreds $=12$ ten thousands.
- Part 4: Add the partial products.

You know to hold the ones place with a zero if the multiplier has a zero in the ones place. Use the same skill if the multiplier has a zero in the tens place.

Example F

- Part 1: Multiply by the 5 ones.
- Part 2: Multiply by the 0 tens.

Hold the ones place with a $0 ; 0 \times 927=0$; Place one zero in the tens place in the second partial product.

- Part 3: Multiply by the 4 hundreds. The ones and tens places are already held by zeros. Start this partial product in the hundreds place on the same line.
- Part 4: Add the partial products.

## Topic C: Estimating Products

Before you practice estimating products, look at the easy multiplication that can be done when the factors end in zeros.

You already know how to quickly multiply by 10, 100, 1000 , etc...
You can find the products in questions like these using regular multiplication:

## But here is a shortcut:

1. Count all the zeros at the end of the numbers in both factors.
2. Write down that many zeros at the end of the product.
3. Multiply the other digits in the usual way and put them before the zeros.

## Example A

$30 \times 500=$

- How many zeros at the end of the factors? 3
- Write them down. 000
- Multiply the other digits and put them before the zeros. $\mathbf{3 \times 5}=\mathbf{1 5}$
$30 \times 500=15000$

## Example B

$400 \times 3000=$

- How many zeros at the end of the factors? 5
- Write them down. 00000
- Multiply the other digits and put them before the zeros. $4 \times 3=12$
$400 \times 3000=1200000$

## Topic D: Multiplication Problems

Multiplication problems usually give information for one unit and ask information for many units. For example, you may be given an average distance for one hour and asked for a distance for six hours. You may be given the price for one item and asked the price for 96 items.

Remember that multiplication is fast addition of equal amounts. Key words for addition may also point to multiplication.

## Key words that point to multiplication:

- altogether
- combined
- in all
- total
- the average is
- product
- how many?
- how much?
- each

## Exercise 1

Do these problems by following the five problem-solving steps. Remember to circle the information and underline what is being asked. Be sure to write down your estimation before you find the actual solution. Check your work using the answer key at the end of the exercise.
a. Maria spent $\$ 151$ a month to ride to work. How much did it cost her to ride to work for the whole year? (1 year = 12 months)
b. Fred travels 121 km a day on his delivery route. How far does he travel in 5 working days?
c. Manuel buys 340 L of gas a month. In 6 months, how many litres of gas does Manual buy?
d. An apartment building has 16 apartments, each rented for $\$ 870$ a month. What is the total monthly rental income from this building?
e. A farmer sells potatoes at $\$ 53$ per 50 kg sack. How much will he get for 75 sacks?
f. Bob is paid $\$ 12$ per hour. If he worked 39 hours last week and 24 hours this week, how much did he earn for the two weeks? (two operations)
g. It costs $\$ 35260$ per working day to run the factory. How much does it cost to run this factory for a month of 23 working days?
h. The train has an average speed of 75 km an hour. How far does this train travel in 14 hours?
i. Lee's sports car averages 18 km per litre. How far can she drive on 12 L of gasoline?
j. Frank bought a used car and paid for it over 15 months. He made 15 monthly payments of $\$ 325$ each. How much did he pay?

## CONGRATULATIONS!!

Now you have finished Unit 1.
TEST TIME!
Ask your instructor for the practice test for this unit.
Once you've done the practice test, you need to do the unit 1 test. Again, ask your instructor for this.
Good luck!

## Unit 2: Division

## Topic A: Introduction and Division Facts

Division is an interesting operation. Both these signs tell you to divide:

$$
8 \div 4 \quad 4 \longdiv { 8 }
$$

Division is the opposite of multiplication.
Multiplication takes equal-sized groups and puts the groups together to find the total.

$$
3 \times 4=12
$$

$$
0000 \quad 0000 \quad 0000
$$

Division takes the total and separates that amount into equal groups. You can find the number of equal groups or the size of each group.

$$
12 \div 4=3
$$

$000000000000=000000000000$

| $4 \times 3=12$ | $12 \div 3=4$ | 4 |
| :---: | :---: | :---: |
| $3 \times 4=12$ | $12 \div 4=3$ | $3 \sqrt{12}$ |

## Learn this vocabulary for division:

- Dividend - The number or quantity to be divided; the amount altogether.
- Divisor - The number we divide by. The divisor tells us the number of groups or the quantity in each group that the dividend is to be separated into.
- Quotient - ("kw ō shent") The answer to a division question.

$$
\frac{\text { quotient }}{\text { divisor }} \begin{aligned}
& \text { dividend }
\end{aligned} \quad \text { dividend } \div \text { divisor }=\text { quotient }
$$

If you have learned your times tables well, the division facts will be easier. The times table chart can be used to find division facts.

To use the times table chart for division facts:

- Find the divisor in the column on the left of the times table chart.
- Run your finger in a straight line across the divisor row until you come to the dividend.
- Go straight up that column and the quotient should be the top number.

Try a few while you are doing Exercise 1.

Exercise 1

Tip: Make a list of any errors that you made and the facts that you had to really think about. If you have any more than five facts on your list, ask your instructor for suggestions on learning and drilling the division facts.

## Remainders

You have been practicing the division facts that always work out evenly - nothing is left over.
Well, in the real world things are not usually so perfect!
You have 7 candies to share among your 3 children.

We call the left-over the remainder. For now, put R and the left over number after your quotient.

$$
7 \div 3=2 \mathrm{R} 1
$$

2 R1
$3 \longdiv { 7 }$

## Example A

Here are 22 cookies. Circle groups of 5 . How many groups of 5 in 22?

You should have 4 groups with 2 left over.

$$
22 \div 5=4 \mathrm{R} 2 \quad \begin{gathered}
4 \mathrm{R} 2 \\
5 \longdiv { 2 2 }
\end{gathered}
$$

The remainder must not be the same size or bigger than the divisor. If it is bigger, it means another group could be made.

## Example B

Here are 66 suns. Make groups of 9 . How many groups of 9 in 66 ?

How many groups? 7
How many left over? 3

$$
66 \div 9=7 \mathrm{R} 3
$$

7 R3
$9 \longdiv { 6 6 }$

Tip: The remainder must not be the same size or bigger than the divisor. Why not? It would make another group.

## Exercise 5

Draw pictures to find the quotient and the remainder. Write each question using the other division sign as well. Have your instructor check your work.

You cannot always draw pictures, so how should you find the quotients?

## Example C

$29 \div 3=$
Use multiplication tables or the division facts to find a trial quotient. What can you multiply by 3 to find a number close to 29 ?

- $3 \times 9=27$
- $3 \times 10=30$

Use 9 as the trial quotient. Do not use 10 because $3 \times 10=30$, which is more than the dividend 29 .

1. Divide.

> 9
> $3 \longdiv { 2 9 }$
2. Multiply. $9 \times 3=27$. Write the product under the 29 .
9
$3 \longdiv { 2 9 }$
27
3. Subtract 27 from 29 to find the remainder.

| 9 |
| ---: |
| $3 \longdiv { 2 9 }$ |
| -27 |
| 2 |

4. Check (compare) to be sure the remainder is less then $(<)$ the divisor. $2<3$
$29 \div 3=9 \mathbf{R} 2$

## Example D

$60 \div 7=$
Think what can be multiplied by 7 to find a number close to 60 .

- $7 \times 8=56$ (good)
- $7 \times 9=63$ (too big)

Use 8 as the trial quotient.

1. Divide.
8
$7 \longdiv { 6 0 }$
2. Multiply.

8
$7 \longdiv { 6 0 }$
56
3. Subtract.

| 8 |
| ---: |
| $7 \longdiv { 6 0 }$ |
| -56 |
| 4 |

4. Compare to be sure the remainder is less than the divisor.
$4<7$

$$
60 \div 7=8 \text { R4 }
$$

## Topic B: Divisibility

Divisibility is when two numbers can be divided without a remainder.
For example, 18 is divisible by 3 because $18 \div 3=6$.
18 is not divisible by 5 because $18 \div 5=3$ with a remainder of 3 .

## Divisibility by 2

A number is divisible by 2 if it ends in $0,2,4,6$ or 8 .

Example A
$438,540,256,12$, and 154 are all divisible by 2 because each number ends in a $0,2,4,6$, or 8 .

## Example B

$351,945,849,347$, and 193 are not divisible by 2 because each number does not end in a $0,2,4,6$ or 8 .

Exercise 1

Circle the numbers that are divisible by 2 . Check your work using the answer key at the end of the exercise.

## Answers to Exercise 1

The following numbers are divisible by $2: \mathrm{a}, \mathrm{d}, \mathrm{e}, \mathrm{h}, \mathrm{j}, \mathrm{k}$.

## Divisibility by 3

A number is divisible by 3 if the sum (total) of the digits is divisible by 3 .

```
Example C
```

63
$6+3=9$
9 is divisible by three, so 63 is divisible by three.

```
Example D
```

148
$1+4+8=13$
13 is not divisible by three, so 148 is not divisible by 3 .

## Example E

## 5892

$5+8+9+2=24$
Add again: $2+4=6$
6 is divisible by 3, so 5892 is divisible by 3 .

Exercise 2

Circle the numbers that are divisible by 3 . Check your work using the answer key at the end of the exercise.

## Divisibility by 5

A number is divisible by 5 if the number ends in 0 or 5 .

```
Example F
```

290 is divisible by 5 because it ends in 0 .

Example G

132 is not divisible by 5 because it does not end in 0 or 5 .

## Exercise 3

Circle the numbers that are divisible by 5 . Check your work using the answer key at the end of the exercise.

## Divisibility by 9

A number is divisible by 9 if the sum (total) of the digits is divisible by 9 .

```
Example H
```

## 135

$1+3+5=9$
9 is divisible by 9 , so 135 is divisible by 9 .

Example I

7578
$7+5+7+8=27$
27 is divisible by 9, so 7578 is divisible by 9.

```
Example J
```

57896
$5+7+8+9+6=35$
35 is not divisible by 9 , so 57896 is not divisible by 9 .

## Topic C: Dividing Larger Numbers by One-Digit Divisors

Several methods are used to divide larger numbers. This book will only teach one method. If you have learned a different method for dividing, ask your instructor to review it with you. You can use the practice exercises in this workbook using whichever method you prefer.

## One-Digit Divisors without Remainders

Division has four steps which are repeated until the dividend is completely divided. Work through the three examples which show these steps.

1. Divide.
2. Multiply
3. Subtract and compare the remainder to the divisor.
4. Bring down the next digit in the dividend and repeat.

## Example A

$294 \div 7=$
Rewrite as $7 \longdiv { 2 9 4 }$
Step 1: Divide.
a. Find a trial quotient using multiplication tables or division facts.
b. Look at the dividend one digit at a time.
i. The first digit is a 2 , which is really 2 hundreds.
ii. Will 7 go into 2? Can you divide 2 by 7 ? No.
iii. Look at the first 2 digits, 29 , which is really 29 tens.
iv. Will 7 go into 29 ? Yes. $4 \times 7=28$.
c. The first number in the quotient is 4 . Place the 4 in the quotient directly above the 9 tens. The 4 is 4 tens in the quotient.

## Step 2: Multiply.

a. Multiply $4 \times 7=28$.
b. Write the 28 under the 29. Draw a line.

| 4 |
| :---: |
| $7 \longdiv { 2 9 4 }$ |
| 28 |

## Step 3: Subtract.

a. Subtract $29-28=1$ (ten).
b. Check $1<7$.

$$
\begin{gathered}
4 \\
7 \longdiv { 2 9 4 } \\
-28 \\
\hline 1
\end{gathered}
$$

## Step 4: Bring down the next number in the dividend.

a. Bring down the next number in the dividend (4), and put it beside the result of the subtraction you just completed (1).
b. Together, they make 14. This 14 is the number that you must now divide.

| 4 |
| ---: |
| $7 \longdiv { 2 9 4 }$ |
| -28 |
| 14 |

## Repeat Step 1: Divide.

a. Divide $14 \div 7=2$
b. Put the 2 in the quotient right after the 4 in the ones place.

42
$7 \longdiv { 2 9 4 }$
-28
14

## Repeat Step 2: Multiply.

a. Multiply $2 \times 7=14$.
b. Write the 14 under the 14 . Draw a line.

$$
\begin{array}{r}
42 \\
7 \longdiv { 2 9 4 } \\
-28 \\
\hline 14 \\
14
\end{array}
$$

## Repeat Step 3: Subtract.

a. Subtract $14-14=0$. There is 0 remainder.
b. Check $0<7$.

$$
\begin{array}{r}
42 \\
7 \longdiv { 2 9 4 } \\
-28 \\
\hline 14 \\
-14 \\
0
\end{array}
$$

There are no more numbers in the dividend to bring down, so you are done.

$$
294 \div 7=42
$$

## Example B

$128 \div 2=$

| 64 |
| ---: |
| $2 \longdiv { 1 2 8 }$ |
| -12 |
| 08 |
| -8 |
| 0 |

Step 1: Divide.
a. Can 2 go into 1 ? No.
b. Can 2 go into 12 ? Yes.
c. How many times?

$$
\text { - } 2 \times 6=12 ; 12 \div 2=6
$$

d. The first number in the trial quotient is 6 . Put the 6 in the quotient directly above the 2 tens dividend.

Step 2: Multiply.
a. $6 \times 2=12$.
b. Write the 12 under the 12 . Draw a line.

## Step 3: Subtract.

a. $12-12=0$
b. Check $0<12$

## Step 4: Bring down the next number in the dividend.

a. Bring down the next number in the dividend (8), and put it beside the result of the subtraction you just completed (0).
b. 8 is now the number to be divided.

## Repeat

1. Divide: $8 \div 2=4$
2. Multiple: $4 \times 2=8$
3. Subtract: $8-8=0$
a. Check $0<2$
4. Bring down the next digit. There are no more digits in the dividend.

$$
128 \div 2=64
$$

## Exercise 1

## Example C

$856 \div 8=$
$8 \longdiv { 8 5 6 }$
Divide
Does 8 go into 8 ? Yes. $8 \div 8=1$.

$$
\frac{1}{8 \longdiv { 8 5 6 }}
$$

## Multiply

$1 \times 8=8$

## Subtract

$8-8=0$. Check $0<8$.

$$
\begin{gathered}
1 \\
8 \longdiv { 8 5 6 } \\
-8 \\
\hline 0
\end{gathered}
$$

## Bring down the next digit

5 is now the number to be divided.

$$
\begin{gathered}
1 \\
8 \longdiv { 8 5 6 } \\
-8 \\
05
\end{gathered}
$$

Now repeat.

## Divide

Does 8 go into 5? No.

You must put a zero to hold the place in the quotient. If a digit is brought down, a digit must be placed in the quotient.

## Multiply

$0 \times 8=0$
10
$8 \longdiv { 8 5 6 }$
$-8$ 05

## Subtract

$5-0=5$. Check $5<8$.

$$
\begin{gathered}
10 \\
8 \longdiv { 8 5 6 } \\
-8 \\
\hline 05 \\
-0 \\
\hline 5
\end{gathered}
$$

## Bring down the next digit

56 is now the number to be divided.

$$
\begin{gathered}
10 \\
8 \longdiv { 8 5 6 } \\
-8 \\
05 \\
-0 \\
\hline 56
\end{gathered}
$$

Now repeat.

## Divide

Does 8 go into 56 ? Yes. $56 \div 8=7$.
Write 7 in the quotient in the ones place above the 6 in the dividend.

| 107 |
| :---: |
| $8 \longdiv { 8 5 6 }$ |
| -8 |
| 05 |
| -0 |
| 56 |

## Multiply

$7 \times 8=56$

$$
\begin{aligned}
& 107 \\
& 8 \longdiv { 8 5 6 } \\
& -8 \\
& 05 \\
& -0 \\
& \hline 56 \\
& 56
\end{aligned}
$$

## Subtract

$56-56=0$. Check $0<8$.

| 107 |
| ---: |
| $8 \longdiv { 8 5 6 }$ |
| -8 |
| 05 |
| -0 |
| 56 |
| -56 |
| 0 |

## Bring down the next digit.

No more digits.

$$
856 \div 8=107
$$

## One-Digit Divisors with Remainders

Do the division exactly the same way that you have been learning. Often there is a remainder after the last subtraction. Write it with the quotient as you already know how to do.

Example D
$259 \div 8=$

| 32 R 3 |
| :--- |
| $8 \longdiv { 2 5 9 }$ |
| -24 |
| 19 |
| -16 |
| 3 |

$259 \div 8=32 \mathrm{R} 3$

## Exercise 3

Divide and show any remainders. Check your work using the answer key at the end of the exercise.

## Check Division by Multiplying

To check your division, do this:

1. Multiply the quotient by the divisor.
2. Add on any remainder.

The product will equal the dividend if your arithmetic is correct.

## Example E

## Topic D: Dividing by Two and Three Digit Divisors

## Finding Trial Quotients:

When dividing by 2-digit numbers, you will need to estimate the quotient. This guess is called a trial quotient.

## Example A

$624 \div 24$
Rewrite as $2 4 \longdiv { 6 2 4 }$
Step 1: Divide
a. Think: $2 \sqrt{6}$ is 3 . So $2 4 \longdiv { 6 2 }$ is about 3 .

Step 2: Multiply and subtract.
3
a. $2 4 \longdiv { 6 2 4 }$

72
b. Since $72>62$, 3 is too large.

Step 3: Try a smaller number, multiply and subtract.
2
a. $2 4 \longdiv { 6 2 4 }$

| 48 |
| ---: |
| 14 |

b. Since $4<24,2$ is correct.

Step 4: Finish the problem.
$630 \div 15$
Rewrite as $1 5 \longdiv { 6 3 0 }$

## Step 1: Divide

a. 15 rounds to 20 . Think: $2 \sqrt{6}$ is 3 . So $1 5 \longdiv { 6 3 }$ is about 3 .

Step 2: Multiply and subtract.

a. | 3 |
| :---: |
| $1 5 \longdiv { 6 3 0 }$ |
| 45 |
| 18 |

b. Since $18>15,3$ is too small.

Step 3: Try a larger number, multiply and subtract.

a. | 4 |
| ---: |
| $2 4 \longdiv { 6 3 0 }$ |
| 60 |
| 3 |

b. Since $3<15,4$ is correct.

## Step 4: Finish the problem.

## Exercise 1

In each question, the trial quotient is either too large or too small. Multiply. Write too large or too small on the line. Then, write the correct trial quotient beside. Check your work using the answer key at the end of the exercise.

Example C
$7 8 \longdiv { 2 7 0 6 }$
Since 78 rounds to 80 , think $8 \longdiv { 2 7 }$. 8 goes into $27 \approx 3$. 3 would be a good trial quotient.

| 3 |
| :---: |
| $7 8 \longdiv { 2 7 0 6 }$ |
| 234 |
| 36 |

Since $36<78$, 3 is a good trial quotient.

## Example D

$2 7 \longdiv { 2 2 0 5 }$
Since 27 rounds to 30 , think $3 \longdiv { 2 2 }$. 3 goes into $22 \approx 7$. 7 would be a good trial quotient.

| 7 |
| :---: |
| $2 7 \longdiv { 2 2 0 5 }$ |

## Two Digit Divisors

Dividing by large divisors is a challenge!
You must estimate how many times one number will divide into another. Use pencil and have an eraser close by when you do these questions. You will use the same steps that you already know.

Example E
$964 \div 75=$

## Step 1: Divide

1. Does 75 go into 9 ? NO
2. Does 75 go into 96 ? YES
3. Estimate
4. Round 75 to 80 - think " 8 "
5. Round 96 to 100 - think " 10 "
6. How many 8 's in 10 ? $(81=8,108=1)$
7. The estimate for the first digit in the trial quotient is 1 .
8. Write $\mathbf{1}$ in the quotient above the 6 tens.

$$
\begin{gathered}
1 \\
7 5 \longdiv { 9 6 4 }
\end{gathered}
$$

Step 2: Multiply

$$
1 \times 75=75
$$

1. Write 75 under 96.

$$
\begin{gathered}
1 \\
7 5 \longdiv { 9 6 4 } \\
75
\end{gathered}
$$

Step 3: Subtract

$$
96-75=21
$$

1. Check $21<75$ ? YES!

$$
\begin{gathered}
1 \\
7 5 \longdiv { 9 6 4 } \\
75 \\
\hline 21
\end{gathered}
$$

Step 4: Bring down the next digit in the dividend. 214 is now the number to be divided.

$$
\begin{array}{r}
1 \\
7 5 \longdiv { 9 6 4 } \\
75 \downarrow \\
214
\end{array}
$$

## REPEAT

## Step 1: Divide

1. Does 75 go into 214? YES
2. Estimate 75 as 80 - think " 8 "
3. Estimate 214 as 200 - think " 20 "
4. 8 goes into 202 times ( $82=16$, so 2082 )
5. The estimate for the second digit in the trial quotient is 2 . Write 2 in the quotient above the 4 in the dividend.

12
$7 5 \longdiv { 9 6 4 }$

| $75 \downarrow$ |
| ---: |
| 214 |

Step 2: Multiply

$$
2 \times 75=150
$$

1. Write 150 under the 214.

12
$7 5 \longdiv { 9 6 4 }$

$$
\frac{75 \downarrow}{214}
$$

150

Step 3: Subtract and check that the remainder is less than the divisor.

$$
\begin{aligned}
& 12 \\
& 7 5 \longdiv { 9 6 4 } \\
& \begin{array}{r}
75 \downarrow \\
\hline 214
\end{array} \\
& 150 \\
& 64
\end{aligned}
$$

Step 4: Bring down - no more digits in dividend.
To check your answer

| 75 |
| ---: |
| $\times \quad 12$ |
| 150 |
| 750 |
| 900 |
| $+\quad 64$ |
| 964 |

## Exercise 3

Carefully divide these questions. Be careful to keep the hundreds in line with the hundreds, the tens with the tens, and so on. You might want to use squared paper for long division. Check your work using the answer key at the end of the exercise.
If you are having any difficulty, ask your instructor to watch you doing a few questions to be sure you are using a correct method.

If the estimate for your trial quotient is too large the result of the multiplication will be larger than the numbers in the dividend.

1. Divide: Trial estimate is 4 .

## 2. Multiply:

1. $4 \times 23=92$
2. 92 is larger than 78 , so 4 is too large an estimate. Erase it. Try $3.3 \times 23=69$
3. 3 is the correct estimate and you can complete the division.

| 1. | $2 3 \longdiv { 7 8 4 }$ |
| :---: | :---: |
| 2. | $\begin{gathered} 4 \\ 2 3 \longdiv { 7 8 4 } \\ 92 \\ \hline \end{gathered}$ |
| 3. | 34 R 2 <br> $2 3 \longdiv { 7 8 4 }$ <br> $69 \downarrow$ <br> 94 <br> 92 <br> 2 |

If the estimate is too small, the result of the subtraction will be larger than the divisor.

1. Divide: Trial estimate is 5 .
2. Multiply: $5 \times 72=360$
3. Subtract:
4. $448-72=360$
5. Check $88<72$ ? NO, 88 is greater than 72 .
6. So 5 is too small. Erase it and use a larger number. 6 will be a better estimate.
7. Divide: $448 \div 82 \approx 6$
8. Multiply: $6 \times 72=432$
9. Subtract:
10. $448-432=16$
11. Check $16<72$ ? YES!
12. Bring down the next digit and complete the division.

## Dividing by 10, 100, 1000...

## What is the pattern? When you divide by 10

1. The ones digit in the dividend becomes the remainder.

$$
1 0 \longdiv { 3 2 4 } = 3 2 R 4
$$

2. The other numbers in the dividend stay the same but each digit is one place value less.

-     - the hundreds become tens
-     - the tens become ones
-     - the ones become the remainder

Find the quotients. Look for the pattern. Check your work using the answer key at the end of the exercise.
a. $1 0 \longdiv { 4 6 }$
d. $1 0 \longdiv { 8 3 2 }$
g. $1 0 \longdiv { 2 4 5 7 }$
b. $1 0 \longdiv { 7 5 }$
e. $1 0 \longdiv { 6 7 4 }$
h. $1 0 \longdiv { 3 6 8 5 }$
c. $1 0 \longdiv { 1 3 6 }$
f. $1 0 \longdiv { 9 5 2 }$

## When you divide by 100

1. The ones and tens digits in the dividend become the remainder.
2. The other digits in the dividend stay the same but each digit is two places less.

- the thousands become tens
- the hundreds become ones
- the tens and ones become the remainder

## Exercise 6

Find these quotients. Look for the pattern when you divide. Check your work using the answer key at the end of the exercise
a. $1 0 0 \longdiv { 3 8 6 }$

## When you divide by 1000

1. The ones, tens, and hundreds digits become the remainder.
2. The other digits stay the same but are three place values less.

- thousands become ones
- ten thousands become tens
- hundred thousands become hundreds

## Exercise 7

## Three Digit Divisors

If the divisor has three digits, use the method you know for two-digit divisors, but estimate the divisor to the nearest hundred to find the trial quotient. Be very careful to put the first digit in the quotient in the correct place.

## Example F

$17902 \div 381=$

## Step 1: Divide

1. Does 381 go into 1 ? NO
2. Does 381 go into 17 ? NO
3. Does 381 go into 179 ? NO
4. Does 381 go into 1 790? YES
5. Estimate 381 as 400 . Think 4.
6. Estimate 1790 as 1800 . Think 18.
7. 4 goes into $18 \approx 4$ times $(4 \times 4=16)$
8. Your estimate is 4 . Write 4 in the quotient above the 0 in the dividend.

> 4
> $3 8 1 \longdiv { 1 7 9 0 2 }$

## Step 2: Multiply

1. $4 \times 381=1524$

$$
\begin{gathered}
4 \\
3 8 1 \longdiv { 1 7 9 0 2 } \\
1524
\end{gathered}
$$

## Step 3: Subtract

1. $1790-1524=266$
2. Check 266 < 381 ? YES!

| $4 8 1 \longdiv { 1 7 9 0 2 }$ |
| :---: |
| 1524 |
| 266 |

Step 4: Bring down the 2. 2662 is now the number to be divided
$3 8 1 \longdiv { 1 7 9 0 2 }$
$1524 \downarrow$
2662

## REPEAT

Step 1: Divide $2662 \div 381=$

1. Estimate 381 as 400 . Think of 4.
2. Estimate 2662 as 2700 . Think 27.
3. 4 goes into $27 \approx 6$ times $(4 \times 6=24)$.
4. Place this estimate in the quotient above the 2

$$
\begin{array}{r}
4 \\
3 8 1 \longdiv { 1 7 9 0 2 } \\
1524 \downarrow \\
\hline 2662
\end{array}
$$

Step 2: Multiply

1. $6 \times 381=2286$ [/latex]

\[

\]

## Step 3: Subtract

1. $2662-2286=376$
2. Check $376<381$ ? YES!

| 46 |
| ---: |
| $3 8 1 \longdiv { 1 7 9 0 2 }$ |
| $1524 \downarrow$ |
| 2662 |
| 2286 |
| 376 |

Step 4: No more digits to bring down.

$$
17902 \div 381=46 \text { R376 }
$$

## Exercise 8

Divide and check your answers. These questions are hard work! Check your work using the answer key at the end of the exercise.

## Divide Numbers That Both End With Zeros

In Unit 1 you learned a shortcut for multiplying numbers that end with zeros.
Now you will learn a short way to divide numbers that both end with zeros. First do this exercise and notice the pattern in the quotients.

## Exercise 1

Divide. Check your work using the answer key at the end of the exercise.
a. $2 \longdiv { 6 }$
e. $5 \longdiv { 2 5 }$
i. $1 4 \longdiv { 2 8 }$
b. $2 0 \longdiv { 6 0 }$
f. $5 0 \longdiv { 2 5 0 }$
j. $1 4 0 \longdiv { 2 8 0 }$
c. $2 0 0 \longdiv { 6 0 0 }$
g. $5 0 0 \longdiv { 2 5 0 0 }$
k. $1 4 0 0 \longdiv { 2 8 0 0 }$
d. $2 0 0 0 \longdiv { 6 0 0 0 }$
h. $5 0 0 0 \longdiv { 2 5 0 0 0 }$

## Here is the shortcut:

When dividing numbers that both end with zeros, cross off the same number of zeros from the end of the divisor and the dividend. This is sometimes called cancelling zeros.

```
Example A
```

$4800 \div 60=480 \not \varnothing \div 6 \not \varnothing$
80
$6 \longdiv { 4 8 0 }$

Example B
$23000 \div 500=23000 \div 5 \not 00$
46
$5 \longdiv { 2 3 0 }$
$20 \downarrow$
30
30
0

## Example C

$2 0 0 0 \longdiv { 6 8 0 \Omega 0 0 }$

$$
\begin{array}{r}
340 \\
2 \longdiv { 6 8 0 } \\
6 \downarrow \\
\hline 08 \\
8 \downarrow \\
\hline 00 \\
0 \\
\hline 0
\end{array}
$$

If you are interested in the facts of arithmetic that make this shortcut work, ask your instructor for an explanation.

## Exercise 2

Quickly find the quotients. Remember to cancel the same number of zeros in both the divisor and dividend in each question. Check your work using the answer key at the end of the exercise.
a. $3 0 \longdiv { 9 0 }$
b. $4 0 \longdiv { 1 6 0 0 }$
c. $3 0 0 \longdiv { 1 2 0 0 }$
d. $4 0 0 \longdiv { 2 0 0 0 0 }$
e. $5 0 0 \longdiv { 3 5 0 0 0 }$
f. $7 0 0 \longdiv { 4 2 0 0 0 }$
g. $6 0 0 0 0 \longdiv { 2 4 0 0 0 0 0 }$
h. $8 0 0 0 0 0 \longdiv { 4 0 0 0 0 0 0 0 0 }$

## Rounding Division Questions to Estimate

## We round numbers and estimate to get a quick answer.

In division, round the divisor and dividend before you divide.

1. If the divisor only has one digit, do not round it,
2. Round the dividend to make the arithmetic easier for yourself.

## Example D

Look at the two ways of rounding this question.

$$
1796 \div 32=
$$

The divisor (32) will round to 30 . This dividend (1796) can be rounded to 1800 or to 2000. Let's try each: Round to 1800.

Round to 2000.

Rounding 1796 to 1800 is easier arithmetic because $18 \div 3$ works out evenly, so $180 \div 3$ works out evenly. Both estimates are correct.

Example E
$2688 \div 28=$

1. Round the divisor (28) to 30 .
2. Round the dividend (2688) to 2700 or to 3000 .

| Round to 2700 | $3 \not \varnothing \longdiv { 2 7 0 \varnothing }$ |
| :--- | :---: |
| Round to 3000 | $3 \not 0)$ |

Both estimates are correct and both are easy to do.

Example F
$2893 \div 47=$

1. Round the divisor (47) to 50.
2. Round the dividend (2893) to 2900 or 3000 .
3. Which rounded dividend will be easier to divide by 50 ?
4. Answer: The 3000 because 5 goes evenly into 30 .

$$
\frac{60}{5 \not \varnothing \longdiv { 3 0 0 \not 0 }}
$$

## Exercise 3

Give an estimated quotient. Show your rounding. Check your work using the answer key at the end of the exercise.
a. $3 6 5 \longdiv { 2 7 6 9 2 }$
b. $2 3 \longdiv { 3 4 4 5 9 }$
c. $4 5 \longdiv { 4 5 9 0 }$
d. $1 6 \longdiv { 6 7 2 9 }$

e. $4800 \div 60=80$
f. $8000 \div 80=100$
g. $4000 \div 80=50$
h. $5600 \div 70=80$
i. $2000 \div 20=100$
j. $20000 \div 200=100$
k. $42000 \div 600=70$

## Topic E: Self-Test

Mark /6 Aim 5/6
A. Give an estimated quotient. Show your work. (6 marks)
a. $9 8 \longdiv { 8 5 4 1 }$
b. $2 7 \longdiv { 2 9 6 3 }$
c. $2 4 1 \longdiv { 2 6 3 4 8 }$

## Topic F: Division Problems

Review Topic F: Problem Solving in Adult Literacy Fundamentals Mathematics: Book Two.
One common type of division problem gives a total amount for several things and asks you to find what the amount would be for one.

| Problems may tell you... | and ask you to find... |
| :--- | :--- |
| kilometres driven in 8 hours (h) | km driven in 1 h |
| cost for 15 kg (or litres, etc.) | cost for one kg |
| pay for 40 hours | pay for one hour |
| rent for one year (12 months) | rent for one month |
| work done in eight hours | work done in one hour |
| kilometres driven on 55 L of gas | km driven on 1 L of gas |

The word per is a Latin word meaning "for each". For example, "Find the kilometres per hour" may be used to mean, "Find the kilometres driven in one hour." A slash (/ ) also means per e.g. km/h.
"Find the average" is another way of asking you to find the amount for one.
It may be difficult to decide which number is the dividend and which is the divisor. These suggestions should help:

- Look at the question in the problem. What do you have to find out? Look for the words "per" and "for one."
- How will the answer be written? That is your clue. If the answer is $\mathrm{km} / \mathrm{h}$ then the division equation will be total $\mathrm{km} \div \mathrm{h}$. Study these examples:
- total of kilometres $\div$ number of hours $=k m / h$
- total of kilometres $\div$ number of litres $=k m / L$
- total cost $\div$ unit $=$ cost per unit
- total pay $\div$ hours (or days, etc.) $=$ pay per hour
- total rent $\div$ number of months $=$ rent $/$ month
- total things done $\div$ total time $=$ number done/unit of time
- Do a quick estimate.
- Look at your estimate and re-read the problem. Does your answer make sense?

To find the average, divide the total amount by the number of items that make up the total. You may first have to add the different items together to find the total.

Average $=$ Total amount number of items that make the total

## Example A

You bowled 5 games with scores of $124,187,164,205,130$. What was your average score?

1. Find the total by adding $124+187+164+205+130=810$
2. Divide the total by number of items $810 \div 5$ games $=162$ per game

## Example B

Joan and Rick have been keeping track of their household costs. They want to plan a monthly budget. Their grocery bills for six months were $\$ 428, \$ 605, \$ 397, \$ 530, \$ 590$, and $\$ 474$. What is their average monthly grocery cost?

1. Find the total amount.

$$
\$ 428+\$ 605+\$ 397+\$ 530+\$ 590+\$ 474=\$ 3024
$$

2. Divide total amount by number of items.

$$
\$ 3024 \div 6=\$ 504 \text { average cost per month }
$$

Some details to remember:

- 1 minute $=60$ seconds
- 1 hour $=60$ minutes
- 1 year $=365$ days
- 1 year $=12$ months
- 1 year $=52$ weeks

Key words that point to division:

- Find the average
- Separated
- Find the $\qquad$ per $\qquad$
- Split
- Find the unit price
- Shared

Exercise 1

Solve these problems. Use the five problem solving steps. Be sure to write down an estimate and check that the estimate makes sense before you find the actual solution. Check your work using the answer key at the end of the exercise.
a. A machine shop can stamp out 360 car parts in an 8 hour working How many parts is that per hour?
b. Izyan paid $\$ 560$ for 4 tires. How much did each tire cost?
c. Bjork earned $\$ 8840$ in 4
i. How much did he earn each month?
ii. How much did he earn per week? ( 4 months is 17 weeks)
d. Theron used 9 L of gasoline to drive 207 km . How many kilometres did he drive per litre?
e. The total cost of the car Elena bought is $\$ 14880$ including taxes and interest. She will pay for it in 24 equal payments. How much will each payment be?
f. Diego worked 8 hours a day for five days and earned $\$ 360$. How much was he paid per hour? (This is a 2 step problem - you must first find the total number of)
g. a) Dae-Hyun and Mi-Ok can afford no more than a total of $\$ 14940$ per year for rent, electricity, and phone. How much can they pay per month?

## Answers to Exercise 1

a. 45 parts per hour
c. $23 \mathrm{~km} / \mathrm{L}$
b. $\$ 140$ per tire
d. $\$ 620$ per payment
i. \$2210 per month
e. $\$ 9$ per hour
ii. $\$ 520$ per week
f. $\$ 1245$ per month

A second type of division problem gives the total amount and the size of each group. You will find the number of groups. You will notice that both numbers have the same units. The answer to the problem will give another unit. This other unit will be asked for in the problem.

## Example C

One necklace uses $\mathbf{1 2 5}$ beads. How many necklaces can Susan make for the craft fair if she has $\mathbf{6} 250$ beads? Find how many groups of 125 there are in 6520.

$$
6250 \div 125=
$$

$$
\begin{array}{r}
50 \\
1 2 5 \longdiv { 6 2 5 0 } \\
625 \\
\hline 0
\end{array}
$$

She can make 50 necklaces.

Example D

If you drive an average speed of 80 km an hour, how many hours will it take you to drive 560 km ? Find how many groups of 80 km there are in 560 km .

$$
56 \not \varnothing \div 8 \varnothing=7
$$

The 560 km trip will take 7 hours.

## Exercise 2

Pay attention to wording and situations as you solve these problems. Use the five problem solving steps. Be sure to write down an estimate and check that the estimate makes sense before you find the actual solution. Check your work using the answer key at the end of the exercise.
a. A train travels 90 km per hour. How many hours will it take the train to go 540 km ?
b. A car gets 16 km per litre of gasoline. How many litres will the car need to go 128 km ?
c. About 8 m is needed for one parking space. How many parking spaces can be made along a street that is 232 m long?
d. If you spend an average of 8 minutes on one math problem, how many problems can you finish in one hour? Will you have any time left? How much?
e. The Skating Club members decided to sell home-made candy to raise money. The boxes they bought will hold 45 pieces of candy. If everyone makes a double batch of fudge they will have 2590 pieces of How many boxes can they fill? How many pieces of fudge are left-over for them to eat?
f. A class of 334 students is going to Victoria by bus. Each bus holds 43 passengers. How many buses do they need? Will there be any empty seats? (Be careful with this one!)

## Answers to Exercise 2

a. 6 hours
b. 8 L
c. 29 parking spaces
d. 7 problems, yes, 4 min
e. 57 boxes, 25 pieces left over
f. 8 buses, 10 empty seats

## Unit Pricing

A unit price is the price for one of something. To find unit price, divide the total cost by the number of things bought.

## Example E

5 shirts cost $\$ 60$
To find the cost per shirt, $\$ 60 \div 5=$

The unit price is $\$ 12$.

## Example F

6 L of oil for $\$ 18$
To find the cost per $\mathrm{L}, \$ 18 \div 6=$
3
$6 \longdiv { 1 8 }$
The unit price is $\$ 3$.

Solve the cost per unit price. Check your work using the answer key at the end of the exercise.
a. 2 CDs for $\$ 26$
b. 3 cans of dog food for $\$ 6$
c. 4 air fresheners for $\$ 8$
d. 2 cat treats for $\$ 4$
e. 2 pizzas for $\$ 22$
f. 2 cans of peanuts for $\$ 8$
g. 2 ice cream for $\$ 12$
h. 4 boxes of chocolate bars for $\$ 48$
i. $2 \mathrm{WD}-40$ for $\$ 6$
j. 3 paint rollers for $\$ 9$
k. 4 tie downs for $\$ 20$
l. 3 boxes of diapers for $\$ 51$
m. 3 work shirts for $\$ 45$
n. 8 pairs of socks for $\$ 64$

## Answers to Exercise 3

a. $\$ 13$
h. $\$ 12$
b. \$2
i. \$3
c. \$2
j. \$3
d. \$2
k. $\$ 5$
e. $\$ 11$
l. $\$ 17$
f. $\$ 4$
m. \$15
g. $\$ 6$
n. \$8

## Best Buy

The best buy is the lowest unit price.

## Example G

You can buy 4 L of canola oil for $\$ 8$ or 10 L of canola oil for $\$ 30$. Which is the best buy?
$\$ 8 \div 4=$ can be rewritten and solved:
$4 \longdiv { 8 }$
$\$ 30 \div 10=$ can be rewritten and solved:
$1 0 \longdiv { 3 0 }$

4 L of canola oil for $\$ 8$ is a better buy since the unit price is $\$ 2$ per L , while 10 L for $\$ 30$ has a unit price of \$3 per L.

## Exercise 4

Solve the unit price and then underline the best buy. Check your work using the answer key at the end of the exercise.
a. 2 L of engine oil for $\$ 8$ or 5 L of engine oil for $\$ 15$
b. 4 tires for $\$ 240$ or 2 tires for $\$ 110$
c. 6 jars of salad dressing for $\$ 24$ or 3 jars of salad dressing for $\$ 15$
d. 7 kg of dog food for $\$ 21$ or 16 kg of dog food for $\$ 32$
e. 3 DVDs for $\$ 54$ or 7 DVDs for $\$ 119$
f. 3 L of laundry soap for $\$ 6$ or 17 L of laundry soap for $\$ 68$

## Answers to Exercise 4

a. $\$ 4, \$ 3, \underline{5}$ for $\$ 15$ is the best buy.
b. $\$ 60, \$ 55,2$ tires for $\$ 110$ is the best buy.
c. $\$ 4, \$ 5,6$ salad dressing for $\$ 24$ is the best buy.
d. $\$ 3, \$ 2,16 \mathrm{~kg}$ for $\$ 32$ is the best buy.
e. $\$ 18, \$ 17,7$ DVDs for $\$ 119$ is the best buy.
f. $\$ 2, \$ 4, \underline{\mathrm{~L}}$ for $\$ 6$ is the best buy.

## Topic F: Self Test

Mark /12 Aim 10/12
A. Solve these problems. (12 marks) $\mathbf{2}$ marks each $\mathbf{- 1}$ for correct method, $\mathbf{1}$ for correct solution.
a. Enrique drove the 1920 km from Dease Lake to Creston in 24 hours. What was his average speed in kilometres per hour?
b. The Evergreen Company employs 26 people. Its total payroll for last month was $\$ 84162$. What was the average monthly pay cheque per person?
c. The proud gardener grew a total crop of 135 cucumbers on 15 plants. What was the average crop per plant?
d. In a recent truckload sale, electric stoves were sold for $\$ 432$. The gross income from the stove sale was $\$ 42336$. How many stoves were sold?
e. The 39 farmers in Jones Valley had a total income last year of $\$ 2905$ 500. What was their average income?
f. A store has an inventory (stock on hand) of chairs with a total value of \$1738. Each chair is to be sold at $\$ 79$. How many of these chairs are there?

## Answers to Topic E Self-Test

A. Give an estimated quotient. Show your work.
a. $80 \mathrm{~km} / \mathrm{h}$
b. $\$ 3237$ per month
c. 9 cucumbers per plant
d. 98 stoves
e. $\$ 74500$
f. 22 chairs

## Topic G: Mixed Problems

Carefully read again the Problem Solving Steps in Adult Literacy Fundamentals Mathematics: Book Two, Topic F or ask your instructor for a copy of those pages. Read the problems to help you get a feel for the wording and problem situations you can expect for addition, subtraction, multiplication, and division problems. Ask your instructor for a list of key words that will point to the operation you should choose.

Exercise 1

Solve these problems using the five problem solving steps. Show your estimation and actual work. Write a sentence answer remembering to use the units. Check your work using the answer key at the end of the exercise.
a. Saika gave her students cinnamon hearts on Valentine's Day. She bought a box of 1120 cinnamon hearts and gave each student 35 candies, using up the whole box. How many students does she have?
b. Each stamp cost 57 cents. Dolores bought 100 stamps. How much money did she spend on stamps (before taxes)?
c. Etienne planted 30 tomato plants in rows of 5 plants. How many rows did he plant?
d. There are 8 servings per large economy-size can of fruit. The restaurant ordered 5 cases with 24 cans per case. How many servings of fruit can the restaurant get from this order? (This is a two step problem - first find the total number of cans. Then find the number of servings.)
e. A train traveled 2250 km at a speed of 75 km per hour. How many hours did the trip take?
f. The regular mountain bike costs $\$ 499$ and the fancy model is $\$ 675$. How much more do you pay for the fancy mountain bike?
g. The members of the Shiny Wheels Bicycle Club ride at an average speed of $16 \mathrm{~km} / \mathrm{h}$. On their weekend trip they rode 2 hours Friday night, 7 hours on Saturday, spent two hours soaking their aching bones at the Hot Springs, and then rode a final five hours on Sunday. How many kilometres did they ride on this weekend trip? (2 steps)
h. Last week Mrs. Sanderson drove 29 km on Monday, 42 km on Tuesday, 5 km on Wednesday, and 21 km on Friday. How far did she drive last week?

## Answers to Exercise 1

a. 32 students
e. 30 hours
b. $\$ 57.00$
f. \$176 more
c. 6 rows
g. 224 km
d. 960 servings
h. 97 km

## Unit 2 Review: Division

You will now practice all the skills you learned in Unit 2. Check your work using the answer key at the end of the review.
A. Complete this chart

|  | Multiplication | Division | Division | "Say" |
| :---: | :---: | :---: | :---: | :---: |
| a) | $\begin{aligned} & 5 \times 3=15 \\ & 3 \times 5=15 \end{aligned}$ | $\begin{aligned} & 15 \div 3=5 \\ & 15 \div 5=3 \end{aligned}$ | $\begin{array}{r} 5 \\ 3 \longdiv { 1 5 } \\ 3 \\ 5 \longdiv { 1 5 } \end{array}$ | "15 divided by 3 is 5. " <br> " 15 divided by 5 is $3 . "$ |
| b) | $3 \times 6=18$ |  |  |  |
| c) | $3 \times 7=21$ |  |  |  |
| d) | $5 \times 9=45$ |  |  |  |

## B. Give the answer.

a. $56 \div 7=$
b. $40 \div 8=$
c. $54 \div 9=$
d. $6 \longdiv { 4 2 }$
e. $9 \longdiv { 7 2 }$
f. $8 \longdiv { 3 2 }$
C. Find the quotients.
a. $7 \longdiv { 6 8 }$
b. $4 \longdiv { 2 9 }$
c. $5 \longdiv { 2 4 }$
d. $6 \longdiv { 5 3 }$
D. For each number, identify if it is divisible by $2,3,5$, and, 9 .

| $\#$ | Number | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{5}$ | $\mathbf{9}$ |
| :--- | :--- | :--- | :--- | :--- | :--- |

| d) | 495 |  |  |  |  |
| e) | 648 |  |  |  |  |
| f) | 745 |  |  |  |  |

E. Find the quotients.
a. $8 \longdiv { 2 9 6 }$
b. $6 \longdiv { 2 5 2 }$
c. $4 \longdiv { 7 3 2 }$
d. $5 \longdiv { 1 7 5 }$
F. Find the quotients.
a. $3 \longdiv { 8 6 }$
b. $4 \longdiv { 9 7 }$
c. $2 \longdiv { 7 1 }$
d. $5 \longdiv { 5 9 }$
G. Find the quotients.
a. $7 \longdiv { 6 1 5 }$
b. $2 \longdiv { 6 4 7 }$
c. $3 \longdiv { 7 8 1 }$
d. $9 \longdiv { 8 3 9 }$
H. Find the quotients.
a. $8956 \div 42=$
b. $3 2 \longdiv { 8 3 2 }$
c. $69140 \div 56=$
d. $3 1 2 \longdiv { 9 9 8 4 }$
e. $41082 \div 334=$
f. $7 8 1 \longdiv { 3 9 7 5 2 }$
g. $2 7 5 \longdiv { 5 5 6 6 1 }$
h. $3 0 7 \longdiv { 9 1 8 3 8 }$
I. Find the quotients.
a. $1 0 0 0 \longdiv { 3 8 6 4 5 }$
b. $18592 \div 100=$
c. $4923 \div 10=$
d. $1 0 0 \longdiv { 1 7 3 4 2 }$
J. Quickly find the quotients. Remember to cancel the same number of zeros in both the divisor and dividend in each question.
a. $2 0 0 \longdiv { 5 0 0 0 0 }$
b. $6 0 0 0 \longdiv { 3 6 0 0 0 0 }$
c. $4 0 0 0 0 \longdiv { 1 6 0 0 0 0 0 }$
d. $7 0 0 0 0 \longdiv { 6 3 0 0 0 0 0 }$
K. Give an estimated quotient. Show your rounding.
a. $3 7 \longdiv { 1 5 7 2 5 }$
b. $5 4 \longdiv { 8 4 7 8 }$
c. $7 6 8 \longdiv { 6 3 7 2 1 }$
d. $6 2 6 7 \longdiv { 5 3 6 4 9 7 }$

## L. Word Problems

a. At the Kaizen Factory, 14325 cars were put together in 5 days. Each day the same number of cars were built. How many cars were built each day?
b. The Blaster Rubber Company needs to make 6912 hockey pucks. Mr. Frost, the foreman, says that their machines can make the pucks in 12 hours. How many pucks would be made in one hour?
c. The distance between Fort St. John and Kimberley is 1092 km . What was your average speed if the trip took 12 hours?
d. The new stadium has 15981 seats divided evenly into 76 sections. Estimate how many seats are in each section?

## M. Solve the cost per unit price.

a. 4 rolls of hockey tape for $\$ 8$
b. 4 cans of butane fuel for $\$ 12$
N. Solve the unit price and then underline the best buy.
a. 2 L of antifreeze for $\$ 6$ or 5 L of antifreeze for $\$ 10$
b. 8 kilograms of bird seed for $\$ 16$ or 4 kilograms of bird seed for $\$ 12$

## O. Word Problems.

a. The bakery uses 43 kilograms of butter in each batch of shortbread cookies. How many batches of shortbread can be made from 3569 kilograms of butter?
b. Each crate that the men unloaded weighed 175 kilograms. If they unloaded 232 crates, how many kilograms did they unload?
c. The parts factory produced 4173 less parts this month than last month. The factory produced 49736 parts this month. How many parts did the factory produce last month?
d. Three Eastjet jets were flown 24826 kilometres, 9423 kilometres and 56015
kilometres. What is the total kilometres the three jets were flown?

## Answers to Unit 2 Review

A. Complete this chart

| \# | Multiplication | Division | Division | "Say" |
| :---: | :---: | :---: | :---: | :---: |
| a) | $\begin{aligned} & 5 \times 3=15 \\ & 3 \times 5=15 \end{aligned}$ | $\begin{aligned} & 15 \div 3=5 \\ & 15 \div 5=3 \end{aligned}$ | $\begin{array}{r} 5 \\ 3 \longdiv { 1 5 } \\ 3 \\ 5 \longdiv { 1 5 } \end{array}$ | 15 divided by 3 is <br> 5. <br> 15 divided by 5 is <br> 3. |

Unit 3: Change and The Metric System

## Topic A: Counting to Make Change

Practice your counting by filling in the counting chart. Have your instructor check your chart when you are done.

| 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 10 |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |

Use your counting chart and start at 0 . Count two and write down that number.

| 0 | 2 | 4 |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |

If you had a pile of toonies or two dollar coins and wanted to know how much money you have, you would count by 2's.

Use your counting chart and start at 0 . Count five and write down that number.

| 0 | 5 | 10 |  |
| :--- | :--- | :--- | :--- |
|  |  |  |  |
|  |  |  |  |

If you had a pile of nickels or five dollar bills and wanted to know how much money you have, you would count by 5's.

Use your counting chart and start at 0 . Count ten and write down that number.

| 0 | 10 | 20 |  |
| :--- | :--- | :--- | :--- |
|  |  |  |  |
|  |  |  |  |

If you had a pile of dimes or ten dollar bills and wanted to know how much money you have, you would count by 10's.

Use your counting chart and start at 0 . Count twenty and write down that number.

| 0 | 20 | 40 |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |

If you had a pile of twenty dollar bills and wanted to know how much money you have, you would count by 20's.

Use your counting chart and start at 0 . Count twenty-five and write down that number.

| 0 | 25 |  |  |  |
| :--- | :--- | :--- | :--- | :--- |

If you had a pile of quarters and wanted to know how much money you have, you would count by 25 's.

## Exercise 1

Write the missing numerals. Check your work using the answer key at the end of the exercise.
a. Count by 5's.

| 0 |  | 10 |  | 20 |  | 30 |  | 40 |  |

## Topic B: Making Change

When you make change, your first goal is to get a number that ends in 0 or 5 . For example, if you bought something for $\$ 4$, the first thing to do would be to get to $\$ 5$. Check out example A below.

Example A
\$4 to \$5
To get from $\$ 4$ to $\$ 5$, you would need 1 loonie.

## Example B

## \$23 to \$25

To get from $\$ 23$ to $\$ 25$, you would need 1 toonie.

## Example C

\$55 to \$60
To get from $\$ 55$ to $\$ 60$, you would need 1 five dollar bill.

## Exercise 1

## Topic C: The Metric System

When you measure something, you are comparing. Measurement is comparing something with a standard unit of measure.

In the past, units of measure were based on things found in a community. Often, lengths of parts of the body were used to measure:

- Inch: the width of a thumb
- Span: the distance from tip of thumb to tip of little finger when the hand is spread out
- Foot: the distance from big toe to heel of foot
- Yard (becomes "rod): the distance from tip of nose to tip of thumb of an outstretched hand and arm
- Cubit: the distance from the tip of the middle finger to the elbow
- Fathom: the distance from the tip of one hand to the tip of the other with both arms stretched out
- Mile: 1000 military double steps in the Roman army (mile passuum means "1000 paces")

The problem with these units was the distances would be different based on the size of the person doing the measuring. The problem grew even more when trade was started between cities.

Over a long period of time, people in different countries came up with different standard units of measure.

The British came up with imperial units such as inch, foot, yard and mile.
The French came up with metric units such as metre, centimetre, litre and gram. In Canada, we use both metric and imperial units.

## Measuring Length

The basic unit of measure for length is the metre (abbreviation $\mathbf{m}$ ). If you stretch your arm straight out beside you, a metre is about the distance from the tip of your nose to the tip of your middle finger.

Exercise 1

Consider the following distances. Answer yes or no if you would use a metre to measure. Check your work using the answer key at the end of the exercise.

## Example:

- The length of a table - Yes
- The width of your watchband - No
a. length of your classroom
b. thickness of a piece of paper
c. length of your pen or pencil
d. height of the door
e. distance from Prince George to Fort Nelson
f. the width of your baby finger
g. the size of a postage stamp
h. the thickness of a quarter

## Exercise 2

Estimate the length of each item. Remember a metre is about the distance from the tip of your nose to the tip of your middle finger when your arm is stretched out beside you. Be sure to include the unit of measure in your answer. Have your instructor check your work.
a. the height of the doorway
c. the width of the doorway
b. the height of your table
d. the length of your arm
e. the distance from the floor to hip
h. the width of the window
f. the distance from the floor to waist
i. the length of your classroom
g. the height of the ceiling
j. the width of your classroom

## Exercise 3

Circle the most reasonable measure. Remember a metre is about the distance from the tip of your nose to the tip of your middle finger when your arm is stretched out beside you. Check your work using the answer key at the end of the exercise.
a. A person's height
i. 2 m
ii. 20 m
iii. 200 m
b. The height of a child
i. 10 m
ii. 100 m
iii. 1 m
c. The length of a house
i. 150 m
ii. 15 m
iii. 1 m
d. The length of a bed
i. 200 m
ii. 2 m

## Measuring Small Lengths and Long Distances

It is hard to measure small things using a metre. To measure small things, you can use centimetre (cm) or millimetre (mm).

A centimetre (cm) is about the width of your baby finger. Remember it is just a guide. A millimetre (mm) is about the thickness of your fingernail.

It is hard to measure long distances using a metre. To measure long distances, you can use kilometre (km). A kilometre is 1000 metres.

## Exercise 4

For each item, circle the unit of measure you would use. Check your work using the answer key at the end of the exercise

|  | Item | Unit of Measure |
| :--- | :--- | :--- |
| a) | the width of a room | $\mathrm{m}, \mathrm{cm}, \mathrm{mm}$ |
| b) | the thickness of a coin | $\mathrm{m}, \mathrm{cm}, \mathrm{mm}$ |
| c) | the length of your pencil | $\mathrm{m}, \mathrm{cm}, \mathrm{mm}$ |
| d) | the length of the hall | $\mathrm{m}, \mathrm{cm}, \mathrm{mm}$ |
| e) | the length of this page | $\mathrm{m}, \mathrm{cm}, \mathrm{mm}$ |
| f) | the length of a screw | $\mathrm{m}, \mathrm{cm}, \mathrm{mm}$ |
| g) | the height of your cup | $\mathrm{m}, \mathrm{cm}, \mathrm{mm}$ |
| h) | the length of a bus | $\mathrm{m}, \mathrm{cm}, \mathrm{mm}$ |

## Measuring Capacity (Volume)

Volume is a measure of how much space something takes up. The basic unit of measure for volume is the Litre ( $\mathbf{L}$ ).

Can you think of two things that we buy in litres? We buy gasoline and milk in litres.
We use millilitres (mL) to measure small volumes. For example, a small cup of coffee is about 180 mL . Can you think of two things we buy in mL ?

## Exercise 7

Write the unit of measure you would use to measure each item (L or mL). Check your work using the answer key at the end of the exercise.
a. Bottle of pop

## Measuring Mass

Mass is a measure of matter in something. The basic unit of measure for mass is the gram (g). We buy sliced meats, bulk food, spices and cereal in grams.

We use kilogram (kg) to measure the mass of large things such as cars, people, flour and sugar. Can you think of two things that we buy in kilograms?

We use milligram (mg) to measure the mass of small things such as medicine or vitamins. A milligram is very small. Can you think of two things that we buy in milligrams?

## Exercise 9

Circle the unit of measure you would use to measure each item. Check your work using the answer key at the end of the exercise

|  | Item | Unit of Measure |

## Metric Prefixes

In the metric system a prefix is used to tell if something is large or small. A prefix is a part of a word that is added to the start of word to change the meaning.

The base units of measure in the metric system are the metre (m), litre (L) and gram (g).
If the prefix kilo is added to one of the base units of measures, such as kilometre or kilogram, you know that these are large amounts.

A kilometre is 1000 metres.
A kilogram is 1000 grams.
If the prefix centi or milli is added to one of the base units of measure, such as centimetre or milligram, you know that these are small amounts.

It takes 100 centimetres to make a metre. It takes 1000 milligrams to make a gram.

| Measures | Large | Base | Small |
| :--- | :--- | :--- | :--- |
| Length | kilometre $(\mathrm{km})$ | metre $(\mathrm{m})$ | centimetre $(\mathrm{cm})$ millimetre $(\mathrm{mm})$ |
| Volume |  | litre (L) | millilitre (mL) |
| Mass | kilogram $(\mathrm{kg})$ | gram $(\mathrm{g})$ | milligram $(\mathrm{mg})$ |

## Exercise 11

## Exercise 13

Write the unit of measure you would use for each item below. Check your work using the answer key at the end of the exercise.
a. Coffee in a cup - millilitres ( $\boldsymbol{m L}$ )
h. Box of cereal
b. Bag of potatoes
i. Distance from Vancouver to Halifax
c. Gas for a car
j. Height of a child
d. Length of the hall
k. Can of soup
e. Vitamin C tablet
l. Window wash for the car
f. Thickness of glass
m . Dose of heart medicine
g. Width of a page
n. Length of a machine bolt
o. Cheese

## Answers to Exercise 13

a. Coffee in a cup - millilitres (mL)

## Area of Rectangles and Squares

Area is the amount of surface within a figure. Area is described using square units.
For example,

- If the figure is a room, the area is the floor surface.
- If the figure is a tabletop, the area is the top surface of the table. If the figure is a roof, the area would be the shingled surface.
- If the figure is property, the area is the ground within the property lines.
- If the figure is this page, the area is the entire flat page that you are reading.

## Example A

Find the area of this rectangle.

The measurements of this rectangle are given in centimetres. To measure the area, we will use squares which are 1 cm by 1 cm ( a square centimetre). How many square centimetres will fit on the surface of this rectangle? Count the 1 cm squares drawn within the Example A rectangle.
The area of this rectangle is $\qquad$ square centimetres.
This is written as $\qquad$ $\mathrm{cm}^{2}$
Square centimetres is usually written $\mathbf{c m}^{2}$ which is said as "square centimetres" or "centimetres squared". The small number is called an exponent and if the exponent is 2 , it means multiplied by itself, $s \mathrm{~cm}^{2}$ means $\mathrm{cm} \times \mathrm{cm}$.
Square kilometres are written $\mathbf{k m}{ }^{2}$. Square metres are written $\mathbf{m}^{2}$.

## Example B

This is a diagram of a large cattle ranch. The measurements of the ranch are shown as kilometres. What is the area of this ranch?

The square units to measure will be square kilometres. The area of this ranch will be the number of units 1 km by $1 \mathrm{~km}\left(\mathrm{~km}^{2}\right)$. The diagram shows how many square kilometres would fit in an area 16 km by 10 km . Count them. The area of the Lone Bar Ranch is $\qquad$ $\mathrm{km}^{2}$.

Did you find a quick method for counting the square units? Did you multiply the number of rows by the number of square kilometres in each row? The quick method of finding the area of a rectangle is to multiply the length by the width.

Use this formula to find the area of a rectangle:
Area of a rectangle $=$ length $(l) \times$ width $(w)$
Length times width can also be expressed as $l w$,

$$
\text { so } \mathrm{A}_{\text {rectangle }}=l w
$$

The answer must be expressed in square units.

Example C

Give the area of a soccer field that is 100 m by 45 m .

$$
A_{\text {rectangle }}=l w
$$

Area of the soccer field $=100 \mathrm{~m} \times 45 \mathrm{~m}=4500 \mathrm{~m}^{2}$

## Exercise 14

Find the area of the rectangles described below. The measures of the length $(l)$ and the width $(w)$ have been given. Draw and label a picture for each. Be sure to write the unit of measure for each answer. Check your work using the answer key at the end of the exercise.
a. $l=10 \mathrm{~cm}, w=6 \mathrm{~cm}$
b. $l=100 \mathrm{~km}, w=70 \mathrm{~km}$
c. $l=400 \mathrm{~km}, w=100 \mathrm{~km}$
d. $l=975 \mathrm{~cm}, w=35 \mathrm{~cm}$
e. $l=196 \mathrm{~cm}, w=28 \mathrm{~cm}$
f. $l=82 \mathrm{~km}, w=12 \mathrm{~km}$
g. $l=60 \mathrm{~cm}, w=250 \mathrm{~cm}$
h. $l=90 \mathrm{~cm}, w=2 \mathrm{~cm}$

## Answers to Exercise 14

a. $60 \mathrm{~cm}^{2}$
b. $7000 \mathrm{~km}^{2}$
c. $40000 \mathrm{~km}^{2}$
d. $34125 \mathrm{~cm}^{2}$
e. $5488 \mathrm{~cm}^{2}$
f. $984 \mathrm{~km}^{2}$
g. $1500 \mathrm{~cm}^{2}$
h. $180 \mathrm{~cm}^{2}$

Squares are rectangles with all four sides congruent (the same length). So to find the area of a square you still use the same formula of multiplying the length times the width. But since the length and the width of a square are the same, you are multiplying the measure of the side (s) by itself. The formula for finding the area of a square is often written using an exponent.

$$
A_{\text {square }}=s^{2}
$$

For example, to find the area of a square piece of property, multiply the length of one side by itself. If the measure of one side of a property is 75 m ,

Area of this piece of property: $75^{2}=75 \mathrm{~m} \times 75 \mathrm{~m}=5625 \mathrm{~m}^{2}$

## Exercise 15

Find the area of the squares. The measure of the side has been given. Draw and label a picture for each. Be sure to write the unit of measure for each answer. Check your work using the answer key at the end of the exercise.
a. A Aquare, if $s=5 \mathrm{~cm}$
d. Asquare, if $s=100 \mathrm{~m}$
b. A Aquare, if $s=125 \mathrm{~km}$
e. Asquare, if $s=14 \mathrm{~km}$
c. Asquare, if $s=4 \mathrm{~mm}$
f. Asquare, if $s=25 \mathrm{~cm}$

## Answers to Exercise 15

a. $25 \mathrm{~cm}^{2}$
b. $15625 \mathrm{~km}^{2}$
c. $2025 \mathrm{~mm}^{2}$
d. $10000 m^{2}$
e. $196 \mathrm{~km}^{2}$
f. $625 \mathrm{~cm}^{2}$

## Problems Using Area

## Exercise 16

Do these problems by following the five problem solving steps. Be sure to draw a picture. Check your work using the answer key at the end of the exercise.
a. A garden in the shape of a rectangle is 34 m long and 20 m wide. What is the area of the garden?
b. Mr. Pavelski has a lot in the shape of a square. If the side of his square lot is 50 m , what is the
area of the lot?
c. A rectangular board is 58 cm wide and 64 cm long. How much area will this board
d. Kyoko bought some curtain material that is 198 cm long and 40 cm How many square centimetres of material did she buy
e. The distance between bases of a baseball diamond (a square) is 27 What is the area of the baseball diamond?
f. The janitor waxed the floor that was 24 m long and 18 m How many square metres of floor did he wax?

## Answers to Exercise 16

a. $680 \mathrm{~m}^{2}$
b. $2500 \mathrm{~m}^{2}$
c. $3712 \mathrm{~cm}^{2}$
d. $7920 \mathrm{~cm}^{2}$
e. $729 \mathrm{~m}^{2}$
f. $432 \mathrm{~m}^{2}$

## Perimeter and Area of Rectangles and Squares

## Rectangle

Perimeter means distance around. To find the perimeter of a rectangle, use the formula

$$
P=2 \times \text { length }+2 \times \text { width } .
$$

$$
\begin{aligned}
P & =2 \times \text { length }+2 \times \text { width } \\
& =2 \times 4 \mathrm{~cm}+2 \times 2 \mathrm{~cm} \\
& =8 \mathrm{~cm}+4 \mathrm{~cm} \\
& =12 \mathrm{~cm}
\end{aligned}
$$

Remember: Multiply first and then add.

Area means the amount of surface within a shape. To find the area of a rectangle, use the formula

$$
A=\text { length } \times \text { width }
$$

Example E

$A=$ length $\times$ width
$=4 \mathrm{~cm} \times 2 \mathrm{~cm}$
$=8 \mathrm{~cm}^{2}$

## Exercise 17

For each rectangle, find both the perimeter (distance around) and the area (amount of surface within). Check your work using the answer key at the end of the exercise.

## Answers to Exercise 17

a. $\mathrm{P}=16 \mathrm{~m}, \mathrm{~A}=12 \mathrm{~m}^{2}$
b. $P=38 \mathrm{~cm}, \mathrm{~A}=84 \mathrm{~cm}^{2}$
c. $P=52 \mathrm{~km}, \mathrm{~A}=153 \mathrm{~km}^{2}$
d. $\mathrm{P}=40 \mathrm{~mm}, \mathrm{~A} 96 \mathrm{~mm}^{2}$
e. $\mathrm{P}=94 \mathrm{~m}, \mathrm{~A}=480 \mathrm{~m}^{2}$
f. $P-166 \mathrm{~m}, \mathrm{~A}=1170 \mathrm{~m}^{2}$
g. $\mathrm{P}=140 \mathrm{~m}, \mathrm{~A}=825 \mathrm{~m}^{2}$
h. $P=400 \mathrm{~m}, \mathrm{~A}=8400 \mathrm{~m}^{2}$

## Square

Perimeter means distance around. To find the perimeter of a square, use the formula

$$
\mathrm{P}=4 \times \text { side or } \mathrm{P}_{\text {square }}=4 \mathrm{~s}
$$

Area means the amount of surface within a shape. To find the area of a square, use the formula

$$
\mathrm{A}=\operatorname{side}^{2} \text { or } \mathrm{A}_{\text {square }}=s^{2}
$$

## Example G

$$
\begin{aligned}
A & =\operatorname{side}^{2} \\
& =(4 \mathrm{~cm})^{2} \\
& =16 \mathrm{~cm}^{2}
\end{aligned}
$$

## Glossary

## addends

The numbers to be added together in an addition question. In $3+5=8$, the addends are 3 and 5 .
axis
Any straight line used for measuring or as a reference.

## balance

Balance has many meanings. In money matters, the balance is the amount left. It might be the amount left in a bank account (bank balance) or it might be the amount you still must pay on a bill (balance owing).

## cancelled cheque

A cheque that has been cashed. The cheque is stamped, or cancelled, so it is no longer negotiable.

## circumference

The distance around a circle; the perimeter of a circle.

## commission

Salespeople may be paid a percentage of the money made in sales. The commission is part or all of their earnings.

## common fractions

e.g., $2 / 3,3 / 7,49 / 50$

## cross multiply

In a proportion, multiply the numerator of the first fraction times the denominator of the second fraction. Then multiply the denominator of the first fraction times the numerator of the second fraction. In a true proportion, the products of the cross multiplication are equal.

## denominator

The bottom number in a common fraction; tells into how many equal parts the whole thing has been divided.

## diameter

The distance across a circle through its centre.

## difference

The result of a subtraction question, the answer. Subtraction gives the difference between two numbers.

## digit

Any of the ten numerals ( 0 to 9 ) are digits. This term comes from our ten fingers which are called digits. The numerals came to be called "digits" from the practice of counting on the fingers!

## discount

An amount taken off the regular cost. If something is bought "at a discount" it is bought at less than the regular price.

## divide

To separate into equal parts.

## dividend

The number or quantity to be divided; what you start with before you divide.

## divisor

The number of groups or the quantity into which a number (the dividend) is to be separated.
equal (=)
The same as

## equation

A mathematical statement that two quantities are equal. An equation may use numerals with a letter to stand for an unknown quantity. $6+\mathrm{Y}=9$

## equivalent

Equal in value; equivalent numbers (whole or fractions) can be used interchangeably; that is, they can be used instead of each other.
estimate
Make an approximate answer. Use the sign $\approx$ to mean approximately equal.

## factors

The numbers or quantities that are multiplied together to form a given product. $5 \times 2=10$, so 5 and 2 are factors of 10 .

## fraction

Part of the whole; a quantity less than one unit.

## horizontal

In a flat position, e.g. we are horizontal when we lie in a bed. A horizontal line goes across the page.

## improper fraction

A common fraction with a value equal to or more than one.

## infinite

Without end, without limit.
invert

To turn upside down.

## like fractions

With the same denominators.

## lowest terms

When the terms of a common fraction or ratio do not have a common factor (except 1), the fraction or ratio is in lowest terms (also called simplest form).
minuend
The first number in a subtraction question.

## mixed decimal

A whole number and a decimal fraction. 1.75

## mixed number

A whole number and a common fraction. $13 / 4$

## multiple

If a certain number is multiplied by another number, the product is a multiple of the numbers. Think of the multiplication tables. For example, $2,4,6,8,10,12,14 \ldots$ are multiples of 2.

## multiplicand

The number to be multiplied.

## multiplier

The number you multiply by.

## negotiable

Something which can be cashed, that is, exchanged or traded as money.

## numbers

Numbers represent the amount, the place in a sequence; number is the idea of quantity or order.

## numerals

The digits $1,2,3,4,5,6,7,8,9,0$ are also called numerals. These ten digits are combined to make infinite numerals. Digits are like letters, numerals are like words, and numbers are the meaning.
numerator

The top number in a common fraction; the numerator tells how many parts of the whole thing are being considered.

## overdrawn

If the value of the cheques or money taken from a bank account is higher than the amount of money in the account, then the account is overdrawn. The account is "in the hole" or "in the red" are expressions sometimes used.

## parallel

Two objects or lines side by side, never crossing and always the same distance from each other. Railway tracks are parallel, the lines on writing paper are parallel.

## percent (\%)

For every one hundred.

## perimeter

The distance around the outside of a shape.

## place value

We understand numbers by the way the digits (numerals) are arranged in relationship to each other and to the decimal point. Each position has a certain value. Our number system is a decimal system. The place value is based on ten.

## prime number

A number that can only be divided evenly by itself and 1.

## product

The result of a multiplying question, the answer.

## proper fraction

A common fraction with a value less than one.

## proportion

Generally, proportion is a way of comparing a part of something to the whole thing. E.g., his feet are small in proportion to his height. In mathematics, proportion is used to describe two or more ratios that are equivalent to each other.

## quotient

The result of a division question; the quotient tells how many times one number is contained in the other.
radius
The distance from the centre of a circle to the outside of the circle.
ratio

The relationship between two or more quantities. E.g., the ratio of men to women in the armed forces is 10 to 3 (10:3)

## reciprocal

A number, when multiplied by its reciprocal, equals 1 . To find the reciprocal of a common fraction, invert it. $3 / 5 \times 5 / 3=1$
reduce

Write a common fraction in lowest terms. Divide both terms by same factor.

## remainder

The amount left when a divisor does not divide evenly into the dividend. The remainder must be less than the divisor.

## sign

In mathematics, a symbol that tells what operation is to be performed or what the relationship is between the numbers.

+ plus, means to add
- minus, means to subtract
$\times$ multiplied by, "times"
$\div$ divided by, division
= equal, the same quantity as
$\neq$ not equal
~ approximately equal
< less than
> greater than
$\leq$ less than or equal to
$\geq$ greater than or equal to

## simplify

See reduce.

## subtrahend

The amount that is taken away in a subtraction question.

## sum

The result of an addition question, the answer to an addition question.

## symbol

A written or printed mark, letter, abbreviation etc. that stands for something else.
term
a) A definite period of time, such as a school term or the term of a loan.
b) Conditions of a contract; the terms of the agreement.
c) In mathematics, the quantities in a fraction and in a ratio are called the terms of the fraction or
the terms of the ratio. In an algebra equation, the quantities connected by a + or - sign are also called terms.
total
The amount altogether.

## transaction

One piece of business. A transaction often involves money. When you pay a bill, take money from the bank or write a cheque, you have made a transaction.
unit
Any fixed quantity, amount, distance or measure that is used as a standard. In mathematics, always identify the unit with which you are working. E.g., $3 \mathrm{~km}, 4$ cups, 12 people, $\$ 76,70$ books, 545 g .

## unit price

The price for a set amount. E.g., price per litre, price per gram.
unlike fractions
Fractions which have different denominators.

## vertical

In an up and down position, e.g., we are vertical when we are standing up. On a page, a vertical line is shown from the top to the bottom of the page.
